

Rear D Harness - RGH1

Model : RGH1

Manufacturer : RidgeGear

The RGH1 harness is a basic access harness fitted with a rear dee only. This harness is used primarily with a fall arrest lanyard (I.e. RGL1), to provide an operative with basic fall protection. When used in conjunction with a "twin leg lanyard" (RGL3), the harness can be used for tower climbing, scaffold and general steel erecting, as the twin leg lanyard would provide continuous attachment through "double clipping".

As with all of the RidgeGear harnesses, the RGH1 is suitable for use with fall arrest blocks, however we recommend the addition of the RGL4 extension strop to facilitate easy connection.

The harness is fully adjustable and is fitted with rip stitch indicators.

DATA

Accredited To
EN 361

Web Material
45mm water repellent polyester.

Fittings
High tensile steel alloy & st/steel

Weight
0.95 kg

Features
Rear attachment point, rip stitch indicators
